

AnTuTu Scores

Geekbench Scores

0% to 100%, which is a bit on the slower side for modern smartphones.

In terms of battery performance, the Pova 6 Neo holds up fairly well under different usage conditions. After a 15-minute session of Call of Duty: Mobile, the battery dropped by just 4%, indicating good power efficiency for gaming. When using Google Maps for an hour, the battery drained by 6%, which is decent for GPS usage, a typically power-hungry task.

While the slower charging speed may be a drawback for some users, the overall battery performance remains reliable.

AI FEATURES

The Tecno Pova 6 Neo impresses with its range of AI features, designed to enhance user experience without breaking the bank. Among the standout features are the AIGC Portrait, AI Cutout, AI Eraser, AI Wallpaper 2.0, AI Artboard, and the Ask AI feature. These functionalities enable users to generate animated portraits, create cutouts from photos, and even experiment with dynamic wallpapers.

However, while the intention behind these features is commendable, their execution can be hit or miss.

For instance, the AIGC Portraits can feel more like animated stickers than true representations, and the AI Eraser sometimes leaves behind traces rather than providing a clean finish.

The AI Wallpaper feature adds a fun twist, though it lacks accuracy, making it more of an entertaining novelty than a must-have tool.

So, I think that while the AI features of the Tecno Pova 6 Neo may not be perfect, they showcase Tecno's ambition to offer AI features at a budget price.

VERDICT

The Tecno Pova 6 Neo 5G stands out in the budget smartphone segment, offering an appealing mix of design and features for its price of Rs 12,999. With its sleek build, large 6.67-inch display, and the 108MP AI rear camera, it captures the attention of those seeking a capable device for casual use and photography.

The MediaTek Dimensity 6300 chipset provides good performance for everyday tasks, making it a suitable option for users who primarily engage in use cases like light gaming and social media browsing.

However, there are notable drawbacks to consider. The display's brightness may leave users wanting more, particularly when using the phone outdoors. Additionally, the slower 18W charging speed could be inconvenient for those on the go.

In summary, the Tecno Pova 6 Neo offers good value for those looking for a stylish and feature-rich smartphone on a budget. While it has its limitations, it can be a good choice for casual users and those wanting to explore AI features without breaking the bank.
