

of personalisation. In our Digit AI-Q score, which combines results from tests like AiTuTu, UL Procyon and AI Benchmark, the Motorola Edge 50 Neo scored 68/100 — a decent but not standout result. Overall, the software experience is smooth, though the phone's performance isn't built for power users.

CAMERAS

The camera setup on the Motorola Edge 50 Neo is undoubtedly one of its major highlights, delivering a strong performance at this price point. The device features a 50 MP primary camera with Optical Image Stabilisation (OIS), a 13 MP ultrawide lens with Auto Focus that doubles as a macro shooter, and a 10 MP telephoto lens with 3x optical zoom. On the front, there's a 32 MP selfie camera capable of 4K video recording.

In good lighting, the primary camera captures detailed and vivid photos with decent dynamic range, though the colours tend to be slightly over-saturated. Portrait mode does well in maintaining accurate edge detection, though skin tones can occasionally appear too saturated.

The ultrawide camera performs admirably, but chromatic aberrations are present in some images, reducing overall sharpness. Macro shots benefit from the autofocus capability, delivering crisp images with impressive details.

The telephoto lens performs well, especially when zoomed in at 3x, retaining sharpness up to 10x before images start to deteriorate. Night mode enhances low-light photography, reducing noise and adding clarity, though it still doesn't match the capabilities of higher-end devices.

For selfies, the 32 MP front camera is more than capable, producing clear and well-balanced images in various

lighting conditions. The video recording is decent across the board, with good detail retention in 4K, although the dynamic range could be improved.

BATTERY LIFE

One of the more disappointing aspects of the Motorola Edge 50 Neo is its battery life. The 4,310 mAh battery, while decent, falls short compared to competitors like the OnePlus Nord CE4, particularly given the phone's power-hungry display. In our tests, the Edge 50 Neo managed 4-5 hours of screen-on time with moderate to heavy usage, which includes social media browsing, video playback, and occasional gaming.

The phone lasted 13 hours and 23 minutes in our 4K video loop test, which is mediocre at best. However, the 68 W fast charger included in the box is a redeeming factor, charging the phone from 0-100% in just 39 minutes. The device also supports 15 W wireless charging, a feature that is rare in this price segment and adds significant convenience for users.

VERDICT

So, is the Motorola Edge 50 Neo worth ₹23,999? If you prioritise a stellar display and a well-rounded camera system, the Edge 50 Neo offers fantastic value. Its performance won't impress power users though, especially those looking for a gaming phone. The battery life is another area of concern, particularly when compared to competitors. However, if you're willing to overlook those shortcomings, the Motorola Edge 50 Neo offers premium features at a reasonable price.

For those on the search for a more powerful phone, the OnePlus Nord CE4 and Nothing Phone (2a) are good alternatives. But for those seeking a sharp display, solid cameras, and a clean software experience

with 5 years of updates, the Motorola Edge 50 Neo makes a strong case in the crowded mid-range market.
