

MyGate's Co-founder shares his vision of adding technology to the living experience of Indians and more

In conversation
with **Shreyans Daga**,
Co-founder, MyGate

Soham Raninga | soham@digit.in

The core of a successful business is to solve real problems in the most efficient and scalable manner. MyGate has exemplified this principle, and we had an enlightening conversation with Mr. Shreyans Daga, co-founder of MyGate, about how the company is transforming the living experience in gated communities across India. From addressing the challenges of gate approvals to venturing into smart consumer devices with the launch of MyGate Locks, the company is continually innovating to enhance security and convenience for its users. In our discussion, Mr. Daga delves into MyGate's mission and vision for 2024, its competitive edge in the smart lock market, upcoming product offerings, and the pivotal role of artificial intelligence and data insights in shaping the future of community living.

Q I've been using Mygate for about seven years and have observed its significant evolution beyond basic gatekeeping into offering numerous new features and value-added services. How would you define what Mygate

Shreyans Daga
Co-founder, MyGate

stands for today, and how would you describe its mission and vision in 2024?

A Mygate was always about solving the problems that are thrown up by new ways of living. The rise of gated communities, coupled with ever-growing deliveries, was a big change which created a new set of challenges. In solving these, we tackled the gate first and solved the friction by easing the approval process at the gate. So, we were always focused on solving for the changing way of living and how we could make it better. Today we've evolved into a comprehensive lifestyle platform that enhances everyday living within gated communities through technology. In 2024, our mission remains to create a secure, connected,

and convenient environment for our users. The vision is centred around 'Living Experience Tech,' where we integrate advanced technology into daily life to foster a more engaging, safer, and socially connected community. Whether it's home security, managing deliveries, or connecting residents, we're building an ecosystem that improves the quality of living for millions of Indian families.

Q The launch of Mygate Locks marks the company's foray into the smart consumer devices segment, aligning well with its overarching goal of home security. How does Mygate plan to compete with established players in this segment, especially considering that consumers often trust well-known brands like Godrej for security and are willing to pay a premium for them? Additionally, what synergies and integrated features have you incorporated between Mygate Locks and the Mygate app to make the adoption of smart locks more seamless and attractive?

A We recognize that established players have built a legacy of trust over decades. However, our unique advantage lies in understanding the specific needs of gated communities and modern households, thanks to our years of experience serving millions of Indian families. Mygate Locks are not imported products; they are thoughtfully designed and built specifically for Indian households. With this in mind,
