

UPGRADING FROM						
Uno	Leonardo	Due	Mega ADK	Ethernet	Mega 2560	UPGRADING TO Arduino™ VARIANT
CONSIDERATION WHEN UPGRADING						
-	Compat-ible	Compatible	Compat-ible	Compat-ible	Compatible	Uno
Compat-ible	-	Compatible	Compat-ible	Compat-ible	Compatible	Leonardo
Analog out, native USB, extra pins if not used	Analog out, native USB, extra pins if not used	-	If Analog out and native USB are not used.	Analog out, native USB, extra pins if not used	If Analog out and native USB are not used	Due
Extra pins and USB host feature, if not used	Extra pins and USB host feature if not used	Compatible	-	Extra pins and USB host feature if not used	USB host feature if not used	Mega ADK
If Ethernet port is not used	If Ethernet port is not used	if Ethernet port is not used	Compat-ible	-	If Ethernet port is not used	Ethernet
Extra pins if not used	Extra pins if not used	Compatible	Compat-ible	Extra pins, if not used	-	Mega 2560

The table consists of various Arduino™ boards and their compatibility with other boards. It also shows considerations that need to be taken when upgrading.

We recommend sticking to these boards initially. With experience, you'll be able to easily change to other variant such as Nano, Micro, Pro, Fio, LilyPad Arduino™, LilyPad USB and other LilyPad variants.

Will my custom designed PCB work with the newer board?

Yes. Until you're using the same basic pins, your PCB will work with the newer boards. Arduino™ boards are designed in a manner that newer boards are compatible with older ones. But, if you're using a newer board (say a later version) and decide to change to a smaller board, you might need to make modifications depending on the pins you're using.
