

COMMUNICATION (NETWORKING AND PROTOCOLS)

Processes text-based messages from the computer.	Messenger
Serial communication on any digital pins. An improved version of the Software Serial library.	NewSoftSerial
Controls devices that use the One Wire protocol.	OneWire
Reads characters from a PS2 keyboard.	PS2Keyboard
Sends messages between Arduino™ and your computer.	Simple Message System
Sends text messages or emails using a cell phone (via AT commands over software serial).	SSerial-2Mobile
Extensible web server library (for use with the Arduino™ Ethernet shield).	Webduino
Sends X10 signals over AC power lines.	X10
Communicates with XBees in API mode.	XBee
Remote controls other Arduino™s over a serial connection.	SerialControl

SENSING

Turns two or more pins into capacitive sensors.	Capacitive Sensing
Reads noisy digital inputs (e.g. from buttons).	Debounce

TIMING

A library for keeping track of the current date and time in software.	DateTime
Helps you time actions at regular intervals.	Metro
Uses the timer 2 interrupt to trigger an action every N milliseconds.	MsTimer2

ware for the Arduino™, you'll find them all here.

Developers are always listening for new features from users that can be included in future versions as well as for bugs found in existing projects. There's plenty of support. If you're stuck due to an issue, chances are that someone has already had that problem and a quick search will solve your problem. However, if you're unable to find a solution, you can post a question and someone will be happy to help you out.

Forum members share new projects they've seen or post ideas, which other users help them implement. It's a good place to get information about different sensors, actuators and driver hardware, which are sometimes difficult to find.
