

Running the Firefox OS on Firefox browser

This is what the Nintendo has to say: “It is not a “second copy” rule and is often mistakenly cited for the proposition that if you have one lawful copy of a copyrighted work, you’re entitled to have a second copy of the copyrighted work even if that second copy is an infringing copy. The backup/archival copy exception is a very narrow limitation relating to a copy being made by the rightful owner of an authentic game to ensure he or she has one in the event of damage or destruction of the authentic. Therefore, whether you have an authentic game or not, or whether you have possession of a Nintendo ROM for a limited amount of time, i.e. 24 hours, it is illegal to download and play a Nintendo ROM from the Internet.”

What to expect in the next few chapters

In the next few chapters, you’ll learn how emulation and virtualisation differ from each other. You’ll also learn how to run a Windows operating system on a Linux-based build, and a Linux build on a Windows operating system. We, of course, won’t run every possible operating system, but you’ll get an idea of how to run an operating system on another and the most reliable tools for it.

We’ll then also look at the differences between a simulator and an emulator, and read about some examples of simulators in action. Further, besides learning to run age-old Windows programs and games on modern
