

VMware Player lets you run a virtual machine on your Windows or Linux system

intended for Macs with Intel processors which use Intel's VT-x technology. It isn't free and Fusion is a more polished version of VMware Player. All the features can be found at <http://dgit.in/VMWFusion>.

Fusion is widely used by home users only. Though people sometimes recommend other software over Fusion, this virtualization tool has always been much more stable. It offers great cross-platform support and good battery life if you're using virtualization on a MacBook. It needs a minimum of 4GB RAM and it runs on Mac OS X 10.8 and later.

VMware Fusion lets you run a virtual machine on your Mac system

Parallels Desktop: Parallels is a desktop and server virtualization software for Mac, which has become a favourite among Mac users who want to try Windows on their Mac systems. Parallels offers many features like moving files between the two operating systems, the ability to open applications
