

command-line tool, CPU virtualisation, sensor emulation, pre-configured devices, etc. One thing that's great about Genymotion is that you can simply drag-n-drop apps to install them on the device.

Genymotion can run on OS X, Windows and Linux.

System requirements

- 2 GB RAM
- 400 MB HDD

YouWave (Paid)

YouWave is amongst the top Android emulators out there. It's based on VirtualBox and has its own virtual disk space which is separate from the Windows File System. Its files are stored inside Virtual Disk (VDI) files. You can access files inside YouWave through its shared folder or through cloud storage services like Google Drive, Dropbox, etc.

Menu screen in YouWave emulator

The system requirements are not high and the interface is user friendly and easy to navigate. One good thing about YouWave app is that it's compatible with Google Wallet and PayPal transactions. And if you're one of those people who uses a lot of money management and banking apps on mobile

devices then YouWave is a good emulator option for you to continue your work on a bigger screen.

It is, however, a paid emulator and you'll have to pay to use it after the trial period is over. The emulated Android environment also lacks the crispness and clarity of devices.

System requirements

- Intel Pentium 1.6GHz CPU
- 1.5GB DRAM
- 500MB disk space
- Windows XP/Vista/Windows 7/Windows 8 (32/64 bit)

BlueStacks (trialware)

BlueStacks is very easy to set up – just go to its website, download, install
