

But, perhaps Andy's best feature (for gamers) would be its ability to use an Android device as a controller. All you have to do is get the Andy Remote Control app from the Play Store and connect it with the Andy emulator running on your device, and you'll have turned your phone into a game controller.

Droid4X

Droid4X was built keeping only powerful performance in mind. As a result, Droid4X is one of the best Android mobile emulators for gaming. That's not all, you can also use your Android device as a con-

troller to control Android games running on your desktop, just like Andy. It comes pre-installed with Google Play Store, which is rare considering many emulators out there don't support Google Play Store.

The icing on the cake is that it supports full-screen mode on the desktop. It might even perform better than other emulators when it comes to gaming. Clicking with the mouse might not be the best way to play a game on an emulated environment, and so Droid4X comes with 'Keyboard Controller' – a mapper which lets you assign keyboard keys to game controls. The Droid4X wins hands down when it comes to choosing an emulator for Android gaming.
