Cloud computing is the future. But, what about everything that led up to this marvel of technology that made everything less complicated? You've probably come across several statistics about how the smartphone you hold in the palm of your hand is 700 times more powerful than the computers that put rockets into outer space a few decades ago. And like the photographer of today, paying homage to the medium that started it all, as users of computers every minute of our lives, we must give due respect to the platforms that started it all.

When Google launched its series of Chromebooks, all you got was a little bit of storage and a browser that was your OS. This is what brings us back to the world of cloud computing and how a simple little interface opens the doors (and Windows) to an era gone by. Here are all the desktop OSes you can experience from the comfort of your web browser.
