

Virtual Audio Streaming is another such commercial tool that offers a similar set of features.

VB-Cable by VB-Audio is donationware that works as a virtual loopback cable as we described above. With it you can record whatever is played in their virtual sound card in full quality using their virtual sound recorder device.

Webcam emulator

If you ever wanted to play back a pre-recorded video while using a software like Skype, this is what you needed. These “emulators” fake the presence of a webcam and let you select the source. One use could just be to pre-process your webcam video and apply effects to it before it is streamed or recorded. Some such software can even route your desktop screen to a webcam feed, letting you share your desktop using software designed only for webcam streaming.

All of the above mentioned features and more can be found in e2eSoft’s VCam software. It isn’t free but it is feature packed. Not only can you play videos and display images, but you can also apply effects, and capture your desktop. And you can overlay all this above an existing webcam feed.

Magic Camera is another alternative to the above, and has a similar set of features.

A better alternative than the above though is ManyCam. For one, it has a free version that offers a nice set of features. It also offers some unique

ManyCam can overlay images, text or even video above your webcam feed.
