

OLD SCHOOL GAMING USING EMULATORS

Emulators are at times a window to a bygone era. We tell you how to enjoy games from your past.

One of the saddest realities of our gaming and software industry is how willing it is to abandon perfectly good old things in favour of something new. It is hard to seriously claim that games that entertained people for hours in the 1980 are suddenly useless. As hardware and software evolve though, old games and software stop working. The digital world has its own forms of decay, but one that is almost self-imposed.

One of the most important uses of Emulation then is in the preservation of old software that can no longer run in modern systems, and the preservation of the knowledge about these systems. The only way to run such software is to recreate around it the environment it needs in order to run.

There are software out there that need a DOS, Windows 3.1 or Windows 9x environment in order to run. One way to do satisfy their need is
