

Central, Just Dance) are just as effective at combining the enthusiasm for gaming with exercise. Physical activity in this form ranges from dancing and aerobics to martial arts and a variety of sports moves giving them a host of benefits such as facilitating family bonding, cardiovascular exercise, sensory motor learning and improved cognitive performance in the bargain.

Will preventing access to tech hinder my child's future?

A certain section of society believes that in an increasingly computerised world, if their young'un are deprived of gadgets at a younger age, they'll be left behind. While it's true that giving kids access to computers is akin to giving them an opportunity of a head start in learning how to use them, let's not forget that by the time he or she graduates from college, tech such as iPads that they've painstakingly learnt to use during school will be obsolete by then. On the bright side though, this means that children exposed to all that tech will be able to more easily adjust to newer inventions than kids who gave it the cold shoulder.

Already there are reports about Finland scrapping cursive handwriting from their curriculum and replacing it with Keyboard typing. Then there are mass movements aimed at kids such as code.org which operate from the belief that coding is the new literacy.

Get involved with children and their tech exposure
