

Why not start 'em young?

For toddlers there is very little other technology that they need to be overly concerned with - most activities should have a physical component to reinforce the motor skills and real world lessons. But soon

after the age of 2 years old most children become active and capable of moving around on their own - this is when things get harder. The wider exposure of independent mobility and the interactions that come with lead to unrestricted exposure and interaction. So for parents who may even try to keep their kids away from tablets and cell phones, there is an inevitable failure in the attempt.

Kinds that are between 2 years and 12 years of age require a more gradual and paced training with technology. This training shouldn't be authoritative or restrictive, rather like training wheel on a bicycle help in educating the child on the discipline required for safety and stability. By making early technology interaction a collaborative experience, between the child and parent, there can be greater control over how the child uses the devices at their disposal. This is especially useful to keep the child focussed on the relevant tasks on the device which if left on their own would lead them from click-to-click down the internet rabbit hole.

But independence is also an important trait that needs to be inculcated within children, so while sitting with a tablet and reading along makes
