

Additional restrictions would be needed in iTunes where age-restriction can be set-up ensuring that no inappropriate content is delivered to your child. By individually allowing separate apps and setting up parental guidance on other internet based portals, parents can evolve the usage of the device as the child grows up. A major suggestion is to disconnect any financial information from the iTunes account so that the child is unable to make purchases from the iStore. This is especially important since many “free” iOS games for kids are actually “freemium” games that have massive in-app purchases. By severing the financial information there is zero chance of an unintended expense. This can also be moderated by not sharing the iTunes password with the child, which may prove problematic as the child grows and needs to download free applications independently. For the early years it is advised that the child always seek permission from the parent before downloading and installing any new app.

For Android

In comparison to Apple iOS, the Android market place is a lot more varied and this truly shows with the degree of depth in child oriented programs. Beyond the typical control settings on an Android mobile or tablet, the Google Play store offers up to 100,000 child oriented applications. These applications offer various interfaces which can add multiple personalities to any device.

KIDO'Z

The KIDO'Z Kid Mode - TV and Games launcher application for the Android OS is a boon for parents who wish

The KIDO'Z launcher for Android

to closely manage their kids tech use in a fun way. The custom interface designed for kids narrows down the access to different media for children while retaining elements that are most relevant, such as educational apps, games and video content. The set-up of the program begins with setting up a user account or accounts, which can vary depending on the number of children using the device. This ensures that each child has a personally satisfying space to learn and have fun within. The interface requires a password to exit and functions like an OS for kids. So as long as the kids
