

Mode, players learn the basics. Players can pick any object from the inventory and building mistakes are forgiven.

In the Science mode, part picking is restricted. You have to complete scientific experiments on Kerbin and within other parts of the solar system before you can unlock them. Career mode adds funds, reputation and contracts. Players should complete contracts to earn money to pay for the

Amazing Alex

Platform: *Android, iOS*

‘Amazing Alex’, created by Rovio Entertainment of Angry Birds fame, is a physics-based puzzle game. Alex is a curious boy who likes to build things with household objects. Players are given goals to complete and supplies they can use to achieve these goals. The main task is to create chain reactions, which are simply sequences of events that achieve the goals. For example, you can set off a line of dominoes which will push a ball off a ledge into a basket below. Stars are scattered all over the place and your aim is to have the event sequence complete without touching them for a higher score.
