

The nice thing about the game is that it uses household and play objects that children are already familiar with. These objects react realistically with one another. Kids learn short-term planning by adjusting to changing conditions and requirements. It puts their planning, flexibility and focus skills to work. They can even create and share their own puzzles for others to solve.

There are over a hundred levels spread across four locations. You start off in 'The Classroom', and then move onto 'The Backyard', 'Alex's Bedroom' and finally 'The Tree House' depending on the stars collected in the previous levels.

The graphics are high quality, fun and engaging. Kids can try recreating the challenges in the real world using Legos and building kits.

Help Alex create chain reactions with these objects

They can then compare how actual physics works as compared to the gameplay and what additional factors contribute to making things tick.

Amazing Alex is often used to help children with ADHD gain focus. Following directions and planning ahead are tasks that these kids have dif-

ficulty with. Amazing Alex helps them focus and plan strategies in a fun way, which helps them respond to it in a much better way than regular classroom activities. Through it, they get hands-on introduction to physics concepts like inertia, gravity and friction.
