

lasting 10 seconds. The timing is perfect since it prevents boredom and those with sketchy internet connections don't have to forfeit midway. You can play as many categories as you like and the more you play, the higher your skill level in that category goes.

QuizUp is fantastic for learning time management and general knowledge. Sometimes questions repeat, which helps you commit them to memory. Children can opt for challenging categories such as

Math and English and then take a break and complete a fun quiz like a Harry Potter themed one. It's also very exciting, because you're playing with real people rather than just a computer interface.

Quiz up is not only informative, but also highly addictive. Kids can spend hours playing and come away with lots of new trivia facts learned and math skills mastered.

Spoilt for choice with Quiz Up

Google Art Project

Platform: PC

The 'Google Art Project' is a collection of over 30,000 works of art from all over the world. From Impressionist artwork at the Art Institute of Chicago to Modern artwork from the Tate at London, the Google Art Project amasses all periods of art. The high resolution images allow kids to get closer to the images and examine every detail. Each museum has nominated one piece as a 'Gigapixel Artwork', which means that Google has captured it using gigapixel photo capturing technology. It produces an image containing 7 billion pixels, so viewers can view the piece in microscopic detail. Be advised, kids could see violence or nudity in these pictures, so it's necessary for guidance of some sort while perusing.

You can either browse the artwork on the webpage or through the online museum in the form of a map. Some international museums that are included in the project are: The National Gallery in London, The Met in New York, the Uffizi in Florence and The Hermitage in St Petersburg.
