

TECH TOYS

Kids are curious by nature, and yet that curiosity needs to be cultivated and nurtured to be put to good use. On that note, here are a bunch of gadgets and resources that'll put any child on the path to becoming the next generation Elon Musk.

Everyone has to start somewhere – Bill Gates' journey to success began with an electro-mechanical typewriter, with which he wrote his first computer program. Another case in point is Mark Zuckerberg, who developed a music player app in high school. But even as early as 2000, technology was still a difficult concept to grasp. Over the years, countless people have worked on making technology more intuitive for the layman to understand. Then along came another wave of innovators that had the brilliant idea of simplifying gadgets to the extent that even kids could use them. The result? A plethora of fun products and services that are now available for children (of all ages, adults included) to start learning with. The downside to this is that the extensive range of options make selecting the right product a tad bit confusing. Fear not. This
