

Check out our last month's FastTrack to get started on this one

have been known to make exciting creations with Arduino. A little girl named 'Super Awesome Sylvia' runs her own electronics podcast, where she showcases the things she creates using Arduino, such as Arduino shields, displays and so on. Another group of kids have created a pair of soccer-playing Arduino robots and went on to become world robot football champions. The founder of the Arduino project, Massimo Banzi, believes that Open Source hardware and the DIY movement is the face of the third industrial revolution. Arduino is fast becoming a popular device to experiment with and helps speed up product developments. Since the project is completely open source (free to modify and share), there are also clones of Arduino manufactured with a specific task in mind, like Wi-Fi modules, Bluetooth modules and servo modules, to name a few.
