

This coupled with increasing reports of kidnappers and sexual predators using online portals to lure unsuspecting children, there is a rising need for software that allows parents to monitor and control their children's Internet usage. Parents are obligated to teach their kids to be mature and responsible when viewing content on the Internet. However, it can be a bit awkward to explain to them why it is important that they keep their distance from websites of a certain nature until they reach a more appropriate age. For this reason, parental control or child monitoring apps are important since they can act as a protective barrier between your children and the dangers of the Internet. In this section, we have outlined a list of applications for PCs and smartphones that should allow you to gain a semblance of control over your child's Internet usage while also maintaining a safe distance, thus allowing them to explore the Web responsibly without having to constantly watch over them with hawk's eyes.

Net Nanny 7

Net Nanny is a household name (quite literally) when it comes to parental tracking and child control utilities; so much so that all similar applications that sprung up were known as Net Nanny clones. Currently, Net Nanny 7 is the most feature-packed parental monitoring app available for PC yet. Some might be put off by the fact that it does not support Windows 7; however, the legacy version of Net Nanny 6.5 is compatible with older, Windows XP PCs, although you will have to forgo a good number of features.

Net Nanny 7 allows you to create a separate login account at the browser level for each child, unlike most other parental apps that require a separate
