

websites. It also boasts of a detailed report generation tool that provided excellently demarcated data visualized in the form of graphs and pie charts. With its web-based interface, you can login from any PC and view a summary of your family's internet usage, subdivided to a customized level of detail. This allows you to view a summary detailing the number of sites blocks or warnings issued (depending on your settings) with the categories and reasons for blocking, as well which user attempted to access these particular websites, along with detailed timestamps and URLs.

## K9 Web Protection

The developers of K9 Web Protection, i.e. Blue Coat Services, may ring a bell as they are well known for developing customized web-protection tools for enterprises. Chances are that if you work for a fairly large organization that stresses on Internet security, your firewall and Internet portal monitoring is handled by an application developed by Blue Coat Services.

It comes as little surprise that K9 Web Protection is based on Blue Coat's existing software, which has been repacked into a feature-rich parental control utility which is free of cost. Although the software is fairly popular owing to its price, it does lack a host of features that are commonplace in other paid applications. On a positive note, the application is very light and is easy to install and setup, making this an excellent option for parents who are considering trying out a parental control utility for basic web-blocking features but are hesitant to spend the money on premium software.

With its default settings, K9 Web Protection blocks over 24 categories of websites including common ones such as gambling, weapons, pornography etc. However, if you wish to enforce stricter rules, Blue Coat has a curated

K9 has 66 different categories of websites that you can choose to block or monitor
