

Restrict access to movies and games on the basis of ESRB and MPAA ratings

7, although the single use license allows you to control up to five different devices, which is a great selling point.

Similar to Net Nanny, Qustodio has ditched the traditional Windows-application-style client and has opted for a more intuitive and also more attractive online dashboard for those who wish to set up devices or alter configurations via a PC/Mac. It also has smartphone apps for Android and iOS, which allow you to track reports and configure settings on the go. The setup procedure is also similar, where you must create profiles for each child, each with their own set of customized restrictions.

Qustodio has a standard block list of around 20 categories, which you can choose to either block or get notified for every time your child attempts to access those particular websites. The latter option, which is also available in Net Nanny and AVG, is particularly useful for when you wish to allow older children access to certain websites, such as entertainment and gaming, but wish to be notified each time they do.

Besides this, Qustodio comes with the standard fare of settings you would expect from top parental control apps, including scheduling Internet access, forcing “safe search” option on search engines, and dynamically analyzing web pages to block profane and smutty content. However, Qustodio also
