

offers some features that you will not find on other parental control apps, such as setting separate limits for each associated device as per the usage habits of the children.

For example, you can block your child's access to their smartphone (on select apps) while they are at school and when they are using their PC to finish homework. You can block PC access late at night while allowing for some time on their phone or tablet. This feature also extends to applications, which means you can restrict your child from playing games during homework hours and bedtime.

SECURE YOUR CHILD'S SMART DEVICE

In this age of mobile technology, kids are slowly being introduced to smartphones and tablets at a very young age. While many parents may be hesitant about handing their children smartphones, it would be foolish to ignore the obvious advantages, such as the ability of knowing their whereabouts at all time, access to a host of learning apps and games, as well as the chance to educate them about the vastness of the internet and how to responsibly use it for the means of research and entertainment.

This vastness of the Internet is unfortunately a double-edged sword. In other words, it is extremely easy for children to stumble across websites with inappropriate content ranging from the slightly sketchy to the dangerously profane. Adult topics such as pornography, violence, drug use, as well as culturally offensive subject matter including sexism, racism, etc. are very easy to search for. While some parents may attempt to inculcate responsible Internet use by means of solid advice and trusting their children's right to make an informed decision, more often than not, children—especially those of a very young age—may have their curiosity piqued and will not hesitate to browse such websites.

For this exact reason, using an effective parental control app on your smart device seems like an excellent option. Below is a list of popular parental control apps packed with features ranging from basic browser filtering to advanced application control.

Net Nanny (Android, iOS)

Net Nanny may be best known for its feature-packed PC/Mac application; however, there is an app available for smart devices on iOS and Android platforms. Both platforms support Internet filtering by blocking access
