

approximation of your child's location should they go missing. The app also has a panic button built into the child app, which your kid can activate in the case of emergency. This will send you (the phone on which the parent app is installed) an immediate notification informing you of your child's approximate location, with an option to call back.

However, eKAVACH's main USP is that it is currently free on both the App Store and Google Play, making it an ideal choice for parents who wish to try out child protection apps.

Parental Control (Android)

Parental Control is an Android exclusive child-friendly application that takes a different approach towards parental safety. It acts as a replacement shell extension (aka home screen) that restricts access to undesirable content, while also providing standard tracking and control features. Like most of

Your kids can access all apps via the home screen

the apps on this list, it has to be used in tandem with a partner app, which in this case is aptly titled Remote Control.

Parental Control takes a restriction to a whole new level with its kid-friendly approach. Instead of selecting which applications to block, you select some to be whitelisted for access. The app then pins these whitelisted apps to the bright, cartoony home screen, which obviously aims to appeal to young children.
