

In addition, the app can prevent your kids from downloading risqué applications by blocking access to Google Play. It can also stop your child from making in-game transactions using your credit card—which is especially a high risk problem in games that innocuously encourage kids to buy these items without properly informing them that actual money will be needed for these items.

The app includes a call-blocking feature wherein the phone can be programmed to allow calls and SMSs from select numbers. This works both ways as your child will only be allowed to make calls to the numbers from the same list, avoiding any accidental, awkward calls to strangers. If you are worried that your child might try to make mischief by changing the settings on the smart device, rest assured they will be wasting their time as the app blocks access to the settings menu. When you find the need to make changes to your kid's device, disabling kid's mode is hassle free as all you need to do is type in the security pin when prompted.

Parental Control also includes a simple but robust tracking feature, by which your child's (specifically, their device's) location is mapped and logged. Although the application is a free download from Google Play, you have the option of purchasing a premium version that unlocks additional features. These include a maximum 12 hours log of your child's movement history, as well as the ability to schedule the app auto launching at a preset period with the option to set different periods for weekends and weekdays.

Qustodio (Android and iOS)

While Qustodio may be better known for its more feature-rich app on the PC and Mac, they also provide a great optional app for Android and iOS. Again, there are numerous similarities to apps from other services on this list. For example, Qustodio supports iOS in the same manner as Net Nanny and

Setting up devices is easy
