ChoreMonster (Android, iOS, Windows Phone, PC)

ChoreMonster takes a very novel approach to tackle an age old problem: getting kids to do their chores with minimal fuss. The basic concept involves parents assigning kids with chores and kids completing chores to earn points that can be redeemed for rewards that can be digital or physical in nature.

To use the app, parents can either download the app on their smartphone or use the intuitive web-based application on their PC or Mac. Parents can then assign chores to their kids, and each chore will have a certain point value, which the child earns after successfully completing their chore. Kids can access chores the same way parents assign them: either using the smartphone app or the web app.

Once kids accumulate enough points, they can redeem them for both virtual and real-life rewards, which have to be set by the parents. You can customize rewards to range from smaller prizes, such as unlocking a movie to watch or getting a small toy as a gift, to larger ones including taking your kids for a family trip. Kids also earn tickets to the Monster Carnival for each chore completed, which they can use to spin the “Monster Wheel” and unlock cool virtual monsters for their collection. Pretty
