

classified them into entertainment, education, home automation and environmental projects. And finally we discuss the potential that cheap microcomputers and the Raspberry Pi have in influencing the future of technology across the world.

We really look forward to you enjoying this edition of Fast Track and welcome your feedback at: editor@thinkdigit.in

Happy tinkering! 

Note: The Raspberry Pi 2 is relatively new and quite a lot of the projects that work on the Raspberry 1 are yet to be fully functional on the newer model owing to the fact that certain software packages are still being re-written for the new hardware. We've put together a small appendix to help you in this aspect. You can check it out here : <http://digit.in/PiAppendix>
