

Spectrum Analyser using Raspberry Pi

- ◆ USB cable for the hard drive
- ◆ SD card
- ◆ Relevant power supplies for the Pi and HDD

Check out the DIY instructions at <http://dgit.in/1Gngjuq>.

Create a spectrum analyser with RGB LED strip and Python

You might have seen a spectrum analyser on your desktop media player showing the bars of varying intensity at various frequencies for audio tracks. A DJ uses it to analyse various components in the sound and change the output, so as to create a great music experience when you're at a club. This DIY is an attempt to create a spectrum analyser using LED lights.

Hardware needed:

- ◆ Raspberry Pi
- ◆ RGB LED strip
- ◆ 10A 5V power supply to drive the LED
- ◆ HDMI monitor and cable
