

Hardware needed:

- ◆ Raspberry Pi
- ◆ PIR sensor
- ◆ Wires for connection

PIR sensor to Raspberry Pi connection

Connect the circuit as shown in the circuit diagram. Now, open the terminal and enter the following command in the terminal to create the Python script that will detect an intruder:

- `nano intruder _ detect.py`
- `import RPi.GPIO as GPIO`
- `import time`
- `GPIO.setmode(GPIO.BCM)`
- `GPIO.setup(7, GPIO.IN)`
- `print ("CTRL+C to exit")`
- `print ("Intruder Detector Ready")`
- `while True:`
- `if GPIO.input(7):`
- `print ("Motion Detected!")`
- `time.sleep(10)`

Now press [Ctrl] + [X] together, then the [Y] key and then press [Enter] to save the file.
