

clock, other than the fact that Illustrator had a considerably smoother user interface. They both had features that allow a cut out of one shape in another.

The rotate feature on Illustrator is far more convenient because of the attention to detail and convenience, although Inkscape had a very intuitive approach for the same result.

Resizing objects was slightly smoother on Inkscape. For the shadow, Illustrator had its very own feature called shadow effect which made it much more convenient as compared Inkscape where we had to make a copy of the clock, change its colour to black and then decrease the opacity and increase the blur. In the end we had two endearing vector images of a clock.
