

OPEN SOURCE VIDEO EDITING

Can free alternatives really do what you need? If so which is the OSS weapon of choice for all your editing needs.

Any discussion of creative suites would be incomplete without addressing the all important necessity of video editing tools. In today's technological age of miniaturised marvels such as Full HD cell phones, everyone is a filmmaker. And with over 52 million hours of video footage uploaded on to YouTube in 2014 alone, the trend of shooting, editing and packaging is clearly on the rise. Even as we see a greater number of people shooting video beyond the web it becomes clear that the need for video editing software is also on the rise. Professional software suites like Final Cut and Adobe Premiere Pro have been keeping pace with this development and have released regular updates for their suites to appease the consumer demand. But in the world of open source platforms these major players are totally non-existent not only because of their high prices but also due to them being restricted to only Windows and Mac OS. To ease this void we present you with numerous open source options for video editing which are available for Linux and Windows.

What is the usage scenario?

Firstly we must take a brief primer on video editing in the digital age or what is commonly known as non-destructive non-linear editing or NLEs. Non-
