In 1992 it won recognition from the Academy Awards for its major accomplishments and an Oscar statue in 1998. The movies that have gone on to win editing Oscars and other awards for editing on the Avid system include the best of the modern age, including *The Dark Knight*, *The Hunger Games*, *The Avengers*, *Black Swan*, *Avatar* and many more. In 2009, the American Cinema Editors awarded Avid a Technical Excellence Award since it had become the de facto choice in the professional movie making industry. The success of Avid is not just the result of its longevity but its on-going evolution which gives it the highest levels of software stability (no RAM leaks and crashes) as well as awesome features like Script Integration that sync up and link text from the script to a video clip. Apart from these unique features the software is also highly endorsed by professional editors for its screen layout and effects tools.
