

The elementary interface makes learning video editing less intimidating and gradual.

Avid Free DV

For Mac users, coming across powerful and free software isn't a very common occurrence. And for these users we present Avid Free DV, which while not a open source software, is remarkably powerful and effective at most editing tasks. The other detail about Avid Free DV is that it isn't available or supported by Avid any longer. It can however be downloaded from other sources on the internet for free and without violating any laws. The software was released by Avid for free to allow hobbyists and non-professional users to take advantage of its software barring the advanced features. The software remains a great way for editors to familiarise themselves with the Avid workflow and layout, and build aptitude for the industry standard Avid Media Composer. And for casual users it allows fast and smooth editing performance for basic editing projects.

Our Pick - Lightworks

And now for the moment of truth - which open source software package is our favourite? Well, it's a tie, sort of. In our experience Lightworks and DaVinci Resolve Lite are both formidable software that offer remarkable performance despite the zero rupee price tag. Technically, Lightworks remains our number one choice since it is the only truly open source program but DaVinci brings a powerhouse of features scarcely seen in a free offering from a major proprietary program.

But coming back to Lightworks, we are highly impressed by its multi-OS compatibility and professional grade features like advanced multicam editing and secondary monitor output. The open source nature of the program allows
