

metadata analytics - it does have the industry's leading colour grading software within it - which makes it an awesome application to have for free. It should also be noted that if you already have an intermediate or advanced hardware setup, Resolve Lite can open up a whole new world of options within even a simple video in terms of colour, style and effects.

For users who wish to use an industry grade editing and colour grading suite on their mid to high end editing rigs, Da Vinci Resolve Lite is a good choice. And most users won't even notice the missing features in this free version such as cloud based collaborative editing, stereoscopic 3D video editing and colour grading, advanced noise and motion effects, 4K, 8 and 10 bit editing and a few other things. If you are a user who wishes to have these features then you clearly have footage which indicates you can afford a high end editing system, so what are you doing looking for free software? Buy professional.

Test Drive: Lightworks vs. Adobe Premiere Pro CC

To demonstrate the radical difference between open source and proprietary video editing systems we conducted a small editing exercise. For this purpose we took Lightworks and Adobe Premiere Pro CC as our comparison tools. We choose Adobe Premiere Pro CC over FCPX and Avid simply because we believe it to be the best professional grade suite on the market today - both in terms of value for money and features.

The goal was to combine footage from different sources into a single video clip with a new audio track and basic transition and adjustment effects, We began by shooting a number of small video clips on three devices: a cell phone (iPhone 5S), a digicam and a DSLR. Once the shots were in our devices we could immediately see a difference between the two software. Adobe allowed us to begin editing the shots taken on the iPhone using its own free professional app called Adobe Premiere Clip. The editing tools, while basic, were the core essentials and also came with a host of effects, transition and audio editing capabilities. Theoretically we could have edited all the footage on the iPhone right there on the screen or resumed it on an iPad via the cloud and then exported it to YouTube or social media. But since we were mixing footage the app was handy in setting up the footage in Premiere Pro remotely via Creative Cloud - which

Resolve became the industry standard soon after the Coen Brothers employed digital color corrections in their film "Oh Brother, Where Art Thou?"
