

Post production has come a long way since the early ages and now is almost completely done on computers. There are dedicated software that take care of your every post production need, be it slicing up videos, adding special effects or adding a computer-generated giant gorilla into it. The listed software have something for everyone, be it a person looking for something to edit his home videos and add a little special effects or hardcore users who want to create hollywood-esque CGIs. You can add any sort of special effects, be it a building on fire or laser sabers, do compositing which basically means adding and overlaying different imagery, and also work with and create professional grade 2D and 3D animations.

Feature rich software

Adobe after effects

Probably the oldest video editing, compositing, visual effects and motion graphics software in the market currently, Adobe After Effects was first launched in the year 1993. The popular software by Adobe is a powerful post production tool that is available for both Windows and Mac and lies relatively on the cheaper end of the spectrum. Most of the videos with swanky visual effects and cool motion graphics that you encounter on random YouTube channels online are created using it. The software comes with a number of features, and even more third party plugins to help you in creating that perfect video.

One of the most popular post production software

Autodesk smoke 2015

One of the most recent entries in the Post processing tool market, the Autodesk Smoke was released in the year 2013 and is a node-based system*. The mac only software comes with a variety of features including the standard 2D and 3D compositing and motion graphic effects, but is heavy on the pocket and available in a subscription-only format. The software comes with a number of features including 3D tracking, ConnectFX node-based* compositing, and lets you create 3D text and import 3D geometry. Cost- starting from \$ 1,470 (annually with basic support)

*footnote- Now you might ask, what a node-based system is? Many video compositors, including After Effects, render the layers linearly
