

or rather, any piece of cloth left if you plan to buy this software. But if you do, you surely would be pantless but not disappointed.

Cost- \$4,213 or Rs 2,70,00(approx.)

HitFilm 3 Pro

Available only for Windows, HitFilm is a software that has carved its niche quickly among

Avatar, Hobbit, Iron Man3. The list of movies where Nuke is used goes on

all the established post production tools in the market. One end of the post production toolset is taken by the various video editing programs while the other end is taken by the visual effects software. HitFilm sits somewhere in the middle of this spectrum, both in the terms of price, and features. The software comes with video editing capabilities, 3D compositing and a variety of visual effects tools, and is aimed primarily at the beginners and intermediate users. HitFilm comes preloaded with a number of preset light and particle effects like adding blood spray or rains. Another nifty feature is the support of a variety of plugins that work with all major editors and is also compatible with OpenFX. A drawback is that you cannot create 3D objects and need to create it in other software before you can import and use it with your video.

Cost- \$299 or Rs 20,000(approx.)

Open Source alternatives

Blender 2.74

Not strictly a post-production software, Blender is basically a professional, free and open source 3D computer graphics, modelling, animation suite which is capable of handling a number of post-production tasks including video editing and compositing. Blender was initially launched as a shareware by a Dutch Animation studio Neo Geo and “Not a Number Technologies” and named after a song on the Swiss electronic band Yello’s album. The software was made open source when the company went bankrupt in the year 2002 and is currently available for Windows, Linux and Mac
