

system with support for adding custom audio tracks, subtitles and menus. It also supports 45 file formats and 60 video and 40 audio codecs. Since 'DVD Flick' reads AviSynth scripts, you can perform advanced post processing of images with its help.

- ◆ **Bombono DVD (bombono.org):** provides a real menu editor with live thumbnails, a timeline, monitor, transcoding, motion menus, reauthoring and support for subtitles. The full blown version of Bombono DVD is available free of cost for 30 days. However, a free version with limited features is available separately. Its website mentions that the software hasn't been updated since 2013.
- ◆ **DeVeDe:** enables you to create CDs and DVDs using a simple user interface. It has the capability to split files depending on their sizes. You can also create DVDs in PAL or NTSC formats. However, we saw that the buttons appear in a language other than English making it difficult to use.
- ◆ **WinX DVD Author (winxdvd.com):** includes a powerful decode encoder engine with high quality audio and video effects. Compatible with a wide range of file formats and DVDs, 'WinX DVD Author' provides support for Windows 10 and nine languages. The program burns the output to a DVD disc or folder including the VOB file. It allows you to create the DVD chapter menu and subtitles.
- ◆ **Apple iDVD:** enables you to create customised DVDs. It can burn movies, photos and music, and is integrated with iTunes, iMovie and iPhoto. However, there's one caveat – you require access to a Mac-based computer to work with the program.
- ◆ **Wondershare DVD Creator:** With 'Wondershare DVD Creator' (idvd-windows.com), you can work on a wide range of video formats and all major disc types. You'll be able to create DVDs with background image, music, buttons, thumbnails and frames. The software offers several menu templates and allows you to retouch and edit media files using an in-built editor. You can also preview a project before burning it to a DVD, which will help you rectify errors.
- ◆ **Windows DVD Maker:** enables you to add menus, music and transitions. You can customise the look and feel of fonts and buttons with styles. However, the program is available only on Home Premium, Professional, Enterprise and Ultimate editions of Windows 7 and 8. If you have any of these editions, Windows DVD Maker should be your starting point for DVD creation.
- ◆ **Brasero:** is an open source DVD authoring program for Linux which pro-
