

Our Pick – Sothink Movie DVD Maker

While it was challenging to shortlist one DVD authoring tool to recommend to you, after testing several programs, we found Sothink Movie DVD Maker to be the most effective and reliable alternative to paid tools.

We suggest Sothink Movie DVD Maker since the software is easy to use and the options are clearly labelled, unlike other software which only displayed icons. All the required steps can be completed from a single dashboard without the need to navigate via different dialog boxes.

Sothink Movie DVD Maker provides support for a wide range of video files such as WMV, AVI, DivX, MPEG, MP4, QuickTime Movie, Real Video, H.264/AVC, M2TS, M2T, MTS and FLV. Moreover, videos from the Sony, Canon and Panasonic HD cameras can also be burnt to the DVDs using the software. We find these features would be useful to advanced users and media enthusiasts.

There's support for synchronal preview of DVD menu editing. You can also get a sneak preview of the selected video directly on the dashboard. It easily lets you trim videos by selecting the start and end points of the clip that needs to be burned. We liked the software for its minimalistic user interface and lack of complicated menus. It has all the necessary elements for DVD authoring, such as a separate Properties box on the right-hand side, using which you can set various options. You can also view a sneak preview of the selected video directly on the dashboard.

Pros: Easy to use, simple user interface, quick burning, variety features

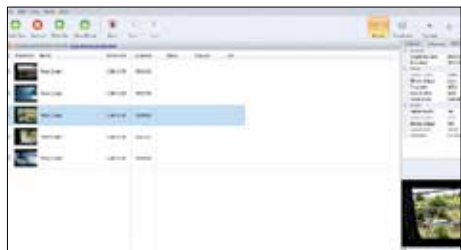

Cons: Payment required for advanced features, unable to add watermark

Taking them out for a spin

We tested a wide range of DVD authoring programs with video clips of less than five minutes duration. Finally, we concluded that Sothink Movie DVD Maker, DVD Flick and Windows DVD Maker performed as per our expectations.

To work with Sothink Movie DVD Maker, select 'Add Files' option on from the toolbar and browse for the video clips. You'll see a list of all selected clips on the dashboard. Next, select 'Burn'.
