

We looked at the feature sets and compared it to the industry standards. We even went ahead and replicated tasks in open source alternatives to see how well they stacked up against the more expensive software; in terms of time and energy efficiency. Some of the software we tested have been featured on these very pages previously while some are guaranteed to be a little obscure. Needless to say, these do make for a great read.

Software is only one half of the problem. Hardware too, is quite expensive. We've gone through multiple configurations and analysed the trade-offs one has to make between expenditure and speed in the last chapter. There were also some interesting discoveries along the way which played right into the hands of a budget conscious entrepreneur or budding enthusiast.

Obviously, it'll be some time before you end up bagging a huge Hollywood contract but before long you can easily end up being the video/audio guy in your family, school or colony. We hope this FastTrack ends up being the stepping stone in your new hobby or venture. Feel free to email us at editor@digit.in about your opinions regarding this FastTrack. Have a good read.
