

X5 is available as a standalone software with a perpetual licence and works out to be cheaper.

Website X5 is also great for e-commerce website development as it supports features like shopping cart, secure payment, SEO, Paypal Option, Web Analytics, and more.

Creating a new project in Website X5 Evolution is as simple as going through the five-step wizard, which is perfect for beginners. The layout is quite simple and not as intimidating as other software and it also has a large repository of in-built templates to get you started on your way.

Weebly

Platform: Web Based, apps available for Android and iOS

Price: Rs 1550/month (approximately)

A future where every app is cloud-based is inevitable as the benefits are just too many. Weebly is a good example of such cloud-based tool which is available for a monthly subscription fee. The advantage of a web-based tool is that it is portable and upgrades to it are instantaneous. Weebly makes it quite simple to build a website by giving you drag & drop functionality with which you can create powerful and professional looking websites. All this without the need to have professional skills. The powerful processing is left to the server and all you have to do is use a web browser to create your website. Weebly has several advantages like a vast array of templates, drag and drop functionality and the best part of all, it allows you to create a mobile website as well. Once you have created your website, Weebly makes it easy to market it as well by giving you access to easy tutorials. You can create great-looking e-commerce websites on Weebly which gives you a vast array of e-commerce tools from shopping to shipping.

OPEN SOURCE ALTERNATIVES

Aptana Studio

Platform: Windows, Mac and Linux

Aptana Studio is basically an Integrated Development Environment (IDE) based on the popular Eclipse IDE which is used for programming. Although Aptana Studio doesn't have a WYSIWYG editor, it supports all the common languages for web applications like HTML, CSS, Javascript, Python, Ruby on Rails, PHP, AJAX and others. Aptana Studio also allows you to develop applications for iOS. This no-nonsense, powerful open source software will
