

appeal to those who know how to code and is one of the most powerful open source website development software available out there.

Microsoft Expressions web

Platform: Windows

Not technically open source and originally released as a paid software in 2006 by Microsoft, Expression Web was made free in 2012 and further development was discontinued, and hence remains proprietary but free to use. It however remains one of the most powerful WYSIWYG editors out there which allows you to create standard-based, high-quality websites. It comes with an intuitive design, clean interface and flexible preview functions. Expression Web allows you to work with HTML/XHTML, CSS, PHP, Javascript, ASP.NET. One point to look for here is that anyone who is comfortable using Dreamweaver, the versions prior to CC, will feel right at home here with the design and code views and their combination in the split screen. And even though further development has stopped on the

Aptana Studio

Microsoft Expressions Web, it contains the complete details for HTML5, so rest assured that when you go about coding HTML5 pages, you will get the Intellisense support. Creating a new style in CSS is like a piece of cake as all you have to do is use the graphical interface to create the new style. Expression Web comes with other useful features like custom workspaces and toolbars, the ability to move tool tabs around, and much more.
