

the code and hence insured that nothing unwanted was inserted which could have bloated the code.

Dreamweaver

The process of creating a web page was quicker in Dreamweaver because of the WYSIWYG interface. We were not required to see what went on in the background and we could simply format the HTML document like we would format a text document.

To conclude, there will be some shortcomings like the WYSIWYG editor which really reduces the time required to create projects but on the other hand, Dreamweaver can really bloat up a code when designing is not done carefully. This is where Aptana has an advantage as it gives you hands-on coding experience. As a result, you end up knowing your website's code like the back of your hand which comes in very handy when its time to engage in the most daunting of tasks – debugging.
