

storage space which you'll get with the paid version. The free version is best used for small projects.

PagePlus Starter Edition (free version)

Platform: Windows

PagePlus is one of the easiest programs to learn and the Starter edition is perfect for personal or small business use. You can use it to print business cards, post cards, greeting cards, etc. Some features such as PDF export and CMYK support are disabled in the Starter Edition.

Fatpaint

Platform: Web-based

Launched in 2010, Fatpaint is a free web-based app for DTP, graphic designing and image editing. It contains tools for laying out pages, editing photos, writing rich text, etc. It combines DTP with brush painting and vector drawing in a flash app. It has extensive features for creating and editing images. You don't need to register on the site to use it; just navigate to the site and directly start using it. We can't use it as a replacement for professional DTP software, but we can use it for small projects. One good thing about this app when it comes to images is that you can pick up images directly from your web searches, Flickr and more such places.

Adobe Project ROME

Platform: Windows and Mac

Project ROME is an Adobe @AIR application that has now been retired, but is still available free for download and use. ROME is an all-in-one content creation and publication application, which is surprisingly very powerful. It's a very intuitively-designed software and the learning curve is very small. Although the templates provided are limited in number, you can create a project from scratch. You can also modify a template to suit your needs whether you're creating printed material, presentations, digital documents or websites. The possibilities are innumerable, limited only by imagination – you can create business cards, brochures, posters, etc. It allows you to export a file in .jpeg, .png, .swf, interactive pdf, image sequence, .svg and .fxg file formats.

OUR PICK – SCRIBUS

When it comes to page layouts, there's no better alternative than Scribus, even
