

though it may not be as polished as the paid DTP software programs. It scores full marks when it comes to functionality. Scribus is absolutely free, so whatever you make in Scribus stays your or your company's property. Professional page layout requires an abundance of colour choices and Scribus oblige with around 200

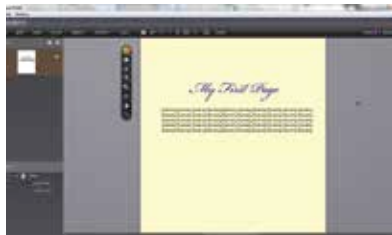

The Scribus UI looks quite neat

colour palettes and more on the way. It supports RGB, CMYK and spot colours and has a good colour management system. You can also simulate various forms of colorblindness to make your project all-inclusive. Scribus stores files in an XML-based format, so that you can access it easily from any text editor. This reduces the risk of file corruption, as you can repair the files easily unlike proprietary software which either encrypt the files or store them in binary format to prevent them from being opened by other software; this ties you down to the software and makes it difficult to recover files once they've been corrupted. When projects are sent to the printing press for professional printing, they're sent in a print-ready PDF format, which follows specific rules. Scribus has a robust PDF creation system and supports the latest formats to ensure that the print-ready PDF files are accurate.

Pros

- ◆ Supports most file formats, ensuring work continuity in case the project source files are from some other software.
- ◆ Stores files in an XML-based format making it easy to open in other editors.
- ◆ Has templates for almost every type of document, and every document has multiple templates which you can further customise according to your requirement.
- ◆ It has a large colour palette of 200 colours for your designing needs with 400 more colours on the way.
- ◆ It has a very robust and
