

it to be. If we pit this OSS against the proprietary softwares, a key feature observed to be missing in the former would be attention to detail. Often you might struggle with distorted indentations, incompatible fonts or poor formatting. OpenOffice, though, is much worse.

One of the major drawbacks of any OSS is that they have relatively less features and very little or no support, which is the case with LibreOffice. A seasoned Acrobat user also might find it coarse to use initially, but eventually get used to it, because it is much faster and lighter than Acrobat.

Let's get practical

A hands-on experience on the aforementioned four softwares suggests the following:

LibreOffice – OSS:

- ◆ Formatting slightly disrupted while editing documents.
- ◆ Unable to retain quality of graphics and images as seen in the source document.
- ◆ Uses up slightly larger amount of RAM and CPU resources.

Adobe Acrobat Pro XI – Proprietary:

- ◆ Editing PDFs is a cakewalk, no formatting glitches.
- ◆ No issues with graphic elements or images.
- ◆ Though experts have emphasized since ages that Adobe is a bloat-

OpenOffice tends to disrupt the entire formatting of the page, though LibreOffice manages to moderately preserve it.
