

ware, no excessive memory usage was noticed except for a few intervals in between.

Nitro Pro 9 – Proprietary:

- ◆ No issues with PDF editing or formatting.
- ◆ Graphic elements and images retained from the source document.
- ◆ Moderate CPU and RAM usage.

OpenOffice – OSS:

- ◆ Several issues with PDF editing, unable to edit without a plug-in. Disrupts formatting of source document partially or completely.
- ◆ Graphic elements and images misaligned or missing.
- ◆ CPU and RAM usage is minimal.

Wrapping up

Table Handling in various PDF softwares (Notice the misalignment in OpenOffice)

If we had to choose one from all the above, we would definitely settle on the Nitro PDF because of its relatively lower price and flawless performance. LibreOffice, however, is that much-desired alternative which doesn't burn a hole in your pocket. If you are not over-enthusiastic about tons of features packed into the proprietary software, and want to get your work done with perhaps relatively less cosmetics and finesse, but free of cost, opt for an OSS.
