

Build parts	Cost(INR)
AMD FX-6300 6-core processor	7643
Gigabyte GA-78LMT-USB3 Motherboard	4689
Sapphire AMD R7 240 2 GB DDR3 Graphics Card	4795
2x Samsung DDR3 2 GB RAM (1333 MHz)	2000
Corsair VS550 550 Watt Power Supply Unit	3500
Seagate Barracuda 1TB Desktop SATA Internal Hard Drive	3747
Deepcool Tesseract Bf Mid Tower Computer Case	2580
TOTAL :	₹28954/-

Now that you've seen what a basic rig would look like, it's important that you know what your rig can and can't do for you :

PROS :

- ◆ Cost. A machine like this shouldn't cost you more than ₹30,000/- because of the components involved.
- ◆ Ease of use : There aren't multiple graphics cards or high-end SSDs to look after.
- ◆ Maintenance : This goes in accordance with the above point. Lesser parts means less repairs and less overall maintenance.

CONS :

- ◆ Performance : Even if you aren't looking to do heavy work, the machine might still feel a bit sluggish at times.
- ◆ Upgradability : That small need for more and more performance does not diminish immediately and you will want to keep upgrading.

RIG #2 : The Graphic Giant:

Cost : Approx ₹90,000/- excluding monitor and speakers

Usage : High graphics work.

If you'll be manipulating graphics at pixel level, editing batches of photos, or creating vector graphics, the above rig won't do. You'll need a high-end graphics machine that can buffer graphics seamlessly. Some of the important components would be :

- ◆ **Graphics cards** : We mentioned at the beginning of this chapter that one can find graphics cards that don't pay much attention to gaming but focus on computing at speeds of up to 5 times faster than that of conventional graphics cards. A good example would be the Nvidia Quadro series or
