

- `</footer>`
- `</article>`
- `{% endblock %}`

While this is certainly a more complex view, there isn't much remarkable about it. Once again we are marking our article's HTML content safe since it is generated by trusted people. You might also want to note how we are displaying the article's featured image and how we are rendering this article's tags by including an external template. Let's take a look at that template next.

`_tags.html`

```
<ul class="inline-list">
  {% for tag in tags %}
    <li>
      <a href="{% url 'tags-
detail' tag.slug %}">
        {{ tag.name }}
      </a>
    </li>
  {% endfor %}
</ul>
```

The article content page

This small template snippet is meant to be included anywhere that a list of tags is required. In fact by changing some names around we can make this generic enough that it could work to generate any list of any kind of item.

`cms/article_list.html`

```
{% extends 'site_base.html' %}
{% block title %}
  Article List
{% endblock %}
{% block content %}
  <ul>
    {% for article in object_list %}
```
