

- `<figcaption>{{ image.alt_text }}</figcaption>`
- `</figure>`
- `{% endblock %}`

cms/tag_detail.html

- `{% extends 'site_base.html' %}`
- `{% block title %}`
- `Browsing: {{ tag.name }}`
- `{% endblock %}`
- `{% block content %}`
- `<header>`
- `<h1>Browsing article with the '{{ tag.name }}'`
- `tag</h1>`
- `</header>`
- `<section>`
- `<ul>`
- `{% for article in tag.article_set.all %}`
- `<li>`
- `<a href="{% url 'articles-detail' article.slug %}">`
- `{{ article.title }}`
- `</a>`
- `</li>`
- `{% endfor %}`
- `</ul>`
- `</section>`
- `{% endblock %}`

Here we once again see `article\_set` in use, and we can see a pattern. Like the Category model, the Tag model does not specify a link to an Article, rather an Article specifies a link to the Tag model. Django automatically created this reverse link.
